

Jetz  
Elevators

Rising to New Heights, One  
Floor at a Time.

## About us

Jetz Elevators, we are team of professionals with vast experience who believe in delivering the best quality products and services. We are specialized in manufacturing & installing all types of elevators. We install them in the most safest way possible. Our elevators are safely running without any complaints. We also focus on the aesthetics of the elevators. Our team provides the best support to the customers. We are specialized in passenger elevators for any structure and any number of floors.

## Our Values

We are passionate about flawless execution and we strive to meet budget and deadlines. We also put our maximum efforts to deliver it on time.

## Our Motto

We at Jetz Elevators wanted our Customers to experience the best out of us.

## Our Aim

Our aim is to provide safe and reliable elevators at affordable prices. Servicing our clients with AMC Plans is also one of our priorities.

## Why Us?

Highly  
Experienced

Higher Quality

Reliability

Smooth Ride

Clarity &  
Transparency

Customized  
Products

Uptime  
Guarantee

Fast Delivery &  
Installation

## Services

We provide regular maintenance for consistent smooth elevator operation. We also provide service contracts in the form of preventive maintenance contracts.

## Technology

We adopt to High Class Technology for better performance of our products. We've chose the best and latest components and materials to ensure safety and efficiency.

## Sales

Our goal is to provide safe, secure and comfortable elevators to our clients. Jetz elevator is a company with more than 15 years of experience in the industry. We focus on satisfying our customers with the products we deliver tailoring each elevator to the needs of customer.

## Installation

We deliver products fast and safely, ensuring high quality according to IS and EN norms. Installation requires advanced technology in the present construction field Jetz installs elevator by adopting the modern technology and delivers safe elevators to satisfy our esteemed customer.

## Annual Maintenance Contract

Types of AMC

- Routine AMC
- Comprehensive AMC.

## Periodic Monthly Fitness Report

Being a service based company we, understand the significance of durability of product we are delivering. Hence, We are having a regular fitness check-up and evaluation file delivered to our clients.

## Swift Response

We have a team to quickly respond to our customers with any technical services simply via call. Clients can

## Emergency & Rescue Service

We're having an effective and efficient service in case of emergency and also we are right here to help you in

## Advantages

• Advanced Protection. • Advanced Reliability. • Higher Passenger Comfort. Various Cabin Designs. • Advanced Reliability

## Custom Solutions

At Jetz Elevators, we understand that every project is unique. Our team of experts is committed to providing customized elevator solutions tailored to your specific requirements. Whether you need a bespoke design, specialized features, or integration with existing architecture, we are here to help.

## Residential Elevators

### HomeLift Series

Sleek and compact elevators designed for residential spaces.

#### Features:

Space-saving design  
Quiet operation  
Customizable interiors

#### Ideal for:

Private homes  
Apartment  
Villas

## Commercial Elevators

### OfficeRise Series

Reliable elevators for office buildings and corporate environments.

#### Features:

High-speed options  
Enhanced safety features  
Modern aesthetics

#### Ideal for:

Office Complexes  
Business Centers  
Hotels

## Retail Lift Series

Durable and versatile elevators for retail spaces and shopping malls.

#### Features:

Heavy-Duty capacity  
Customizable interiors  
Robust construction

#### Ideal for:

Shopping centers  
Retail stores  
Supermarket

# Machine Room Elevator-MR

MR Geared Elevators are designed with a dedicated machine room that houses the motor, gearbox, and advanced control systems. The integrated gearbox reduces motor speed while increasing torque, ensuring smooth, controlled, and efficient vertical movement. A precisely balanced counterweight system minimizes load on the motor, improving energy efficiency and ride comfort.

Equipped with intelligent control systems, MR geared elevators offer accurate stopping, smooth levelling, and enhanced safety performance. Widely used in medium to high-rise buildings, they are ideal for projects with moderate to heavy passenger traffic. These elevators can operate at speeds of up to 2.5 m/s and serve travel heights of up to 75 meters, making them a reliable and cost-effective solution for modern buildings.

Capacity	Load	Shaft Size		Car Size		Entrance		Type
		W	D	W	D	W	H	
4	272	1500	1200	1100	700	700	2000	ACO
5	340	1500	1350	1100	850	700	2000	ACO
6	408	1500	1500	1100	1000	700	2000	ACO
8	544	1800	1600	1300	1100	800	2000	ACO

20	2300	2300	2500	1500	2000	900	2000	ACO

# Machine Roomless Elevator-MRL

MRL (Machine Room-less) Gearless Elevators eliminate the need for a separate machine room by integrating the drive system within the hoist way, allowing for efficient use of building space. These elevators operate using advanced gearless traction machines powered by a Permanent Magnet Synchronous Motor (PMSM) directly coupled to the energy-efficient traction sheave, delivering smooth, quiet, and performance

An intelligent control system ensures precise starting, stopping, levelling, and continuous safety monitoring, with optional destination control for improved passenger flow. The counterweight system balances the elevator car, reducing motor load and overall energy consumption.

Ideal for modern commercial and high-rise buildings, MRL gearless elevators combine space savings, high efficiency, and superior ride comfort. Typical operating speeds range from 1 m/s to 4 m/s, while high-speed configurations can reach up to 10 m/s. These systems are capable of serving travel heights of over 500 meters, depending on design and application requirements.

# Hydraulic Elevator

Hydraulic Elevators operate using fluid pressure to raise and lower the elevator car within a shaft. The system consists of a hydraulic piston, usually positioned beneath the car, which extends when hydraulic fluid is pumped in to lift the car and retracts as the fluid is released to allow descent. An electrically driven hydraulic pump supplies the fluid required for upward movement.

An advanced control system manages smooth starting, stopping, accurate levelling, and continuous safety monitoring. Hydraulic elevators are commonly used in low-rise buildings, typically serving up to six floors, and are valued for their simple design and reliable operation. While they operate at slower speeds and are less energy-efficient compared to traction elevators, they are well suited for shorter travel requirements, with maximum speeds of 1 m/s and a travel height of up to 18 meters.

# Hospital / Stretcher Elevator

Hospital Elevators are designed for smooth and safe transportation of patients, stretchers, wheelchairs, and medical equipment. Built to meet modern hospital requirements, they combine a refined appearance with reliable performance and high safety standards.

The cabins use Lampre sheets, safe for human contact and free from skin-related health risks associated with PPGI. With S2 and D0 fire-rated materials, the elevators produce harmless, zero-drip smoke during fire, making them a safer space in emergencies.

Featuring automatic centre-opening doors, capacity of up to 26 passengers, and wide door openings from 900 mm to 1500 mm, these elevators ensure easy access. Safety and convenience are enhanced through UCM devices, live monitoring, intercom facility, mobile app operation, ultra-smooth ride, and an automatic brake system—ideal for demanding hospital environments.

# Jetz standard COP & LOP

COP (Car Operating Panel): The control panel located inside the elevator car. It allows passengers to select destination floors and manage in-car functions.

LOP (Landing Operating Panel): The control panel located outside the elevator on each floor. It is used to "call" the elevator to that specific landing.
